Theories for Pitcher Injury

- Freak accidents / Random Noise
- Wear-and-tear over time
- Harder/Faster pitches being thrown

Data and Methods

- Raw Pitch F/X data with every pitch thrown in 2013-2015 seasons
- Features of Interest - Pitch type, velocity, spin rate, spin direction, release point
- Used prior season data to predict injuries the following season
 - I.e. 2014 pitch data to predict 2015 injuries
- Random Forest
 - Non-linearity / Interactions
 - Ensemble method - weak learners -> strong learner
